Who are we?

ClearCloud deliver cloud as intended, enabling businesses to embrace cutting-edge technology through smooth, simplified and sustainable adoption.

Based in Manchester, we help clients adopt Cloud the right way. Our solutions are well architected, our methods are proven, and our consultants teach your team to become Cloud engineers themselves.

Our team have industry-spanning experience and cross-platform expertise on both Azure and AWS. We live and breathe cloud platforms and educate customers on adopting best practice.

How can we help your business?

We're honest. We don't sell solutions that won't benefit your organisation and we'll be frank if we believe you're trying to push a round peg into a square hole.

Whether you're new to the Cloud or have a legacy system that needs overhauling, we'll help you get it right the first time, fully optimised and firing on all cylinders.

We specialise in:

- **AWS & Azure platforms**
- **Cloud security & compliance**
- **Cloud migrations**
- **Database optimisation & administration**
- **Managed DevOps**
- **Multi-cloud services**
- **Managed billing**

Managed Cloud

When it comes to the management of cloud, there are many specialist platforms, complex DevOps environments and security barriers to contend with. In addition, your business may not have the required experience and in-house expertise.

That's where we come in! ClearCloud's team of Azure and AWS Platform specialists help build, optimise and manage your platform, applying automation best practices to ensure your organisation experiences the full value of your cloud solution.

These are some of the things we can help with:

- Take on the heavy-lifting to increase efficiency and availability
- Build and operate workloads following best practices and frameworks specifically designed for each platform
- Leverage world-class expertise to support launches and migrations.

To build a full cloud team you probably need more people than you think. ClearCloud provides you with all of the expertise required.

- Business Leader / Platform Owner
- Lead Architect / Engineer
- DevOps Engineers
- Service Manager
- Project Manager
- Security Specialists
- Database Administrator

ClearCloud offers a flexible and tailored approach to customer engagement. We work with you from the offset to establish an exact scope of work (SOW) and to understand your preferred parameters for initial and ongoing engagement. This could mean building a brand new deployment or taking over an existing account for ongoing support and management. By default, ClearCloud maintains all customer infrastructure as code (IaC).

Support

The ClearCloud value proposition is quite different to many other consultancies or managed service providers. We offer three distinct service levels - Freefly, Tandem and Formation - along with a managed security bolt-on for those with advanced security compliance requirements.

Formation Level Features

<p>Proactive Support & Incident Response</p> <p>Our engineers continuously tailor your solution to improve efficiency and performance, not just when something goes wrong!</p>	<p>Emergency: < 15min Urgent: < 1 hour Standard: < 4 hours</p>
<p>24/7/365 Monitoring and Alerting</p> <p>All solutions are monitored by our 24/7/365 operations team.</p>	<p>✓</p>
<p>Full Infrastructure & Environment Automation</p> <p>All solutions are templated to ensure easy platform changes and recovery from outages.</p>	<p>✓</p>
<p>Access to certified Architects and Engineers</p> <p>All of our architects and engineers are certified with experience in building and managing complex solutions.</p>	<p>✓</p>
<p>Database Support</p> <p>Whether it's MySQL or MSSQL, Oracle or Postgres, our engineering team has you covered.</p>	<p>Optional (See database management as a service)</p>
<p>Operating Systems</p> <p>Linux or Windows? Don't worry we've got you covered for all configuration and patching.</p>	<p>✓</p>
<p>Application Support*</p> <p>The age old application vs. infrastructure argument? Not with ClearCloud, we'll help you with both.</p>	<p>✓</p>
<p>Monthly cost review</p> <p>We keep tabs on your usage so you don't have to. If we can find a way to help you pay less to, we will.</p>	<p>✓</p>

*Application support is provided as best-efforts and is not included within our Managed Support SLA.

Cloud Security & Compliance

“53% of companies report a problematic shortage of cybersecurity skills*”

ClearCloud provides skills on-demand for organisations looking to increase their cybersecurity posture. You don't need to hire a cybersecurity team or build a

SOC, and our experts have worked across the most highly targeted industries.

We build defence in depth and highly resilient environments to ensure business continuity during and after a breach. Would you

know what to keep on, turn off, who to inform, what to shield and where to investigate first? We help you define your security plan.

Our solutions are all built to a gold standard of compliance and security, leveraging our experience in highly regulated industries for some of the most mission-critical systems in the cloud.

ClearCloud works with a range of technology providers to implement:

- **Accurate, account-level threat detection**
- **Continuous monitoring**
- **Threat detections developed and optimized for the cloud**
- **Threat severity levels**
- **Automated threat response**
- **Highly available security**
- **One-click deployment**

Cloud Migrations

Don't just lift & shift. Migrate and innovate!

Utilising ClearCloud's best practice approach over years of experience, we make sure your app is migrated safely to AWS and Azure Platforms. Our technical architects break down the process within cloud environments that match your budget and demands, whilst completely elastic and scalable.

Managed DevOps

With our next-generation DevOps Managed Service, we provide as much or as little advice or help as you need, working alongside your developers or existing technology teams. Our service ensures that your cloud solutions are well-architected; designed for high availability, scalability, low cost, and most importantly, security.

Why Fully Managed DevOps?

Many businesses make the critical mistake of creating a jigsaw of all the DevOps tools available to them. For many businesses it is the first time they've done this and it often ends in things not working correctly.

ClearCloud's fully managed DevOps is born from our engineering team's countless decades of experience working on different projects, and we've selected the best set of tools to get you started on your DevOps journey.

This means development leaders can:

- Keep their teams focused on great code, not infrastructure
- Bring out new products & services quicker than ever
- Make sure their teams are learning relevant practices
- Immediately roll back to previous versions

ClearCloud Managed Automation	 Visual Studio Team Services	Orchestration		
	 Powershell (DSC)	Your Application (Deployment)		
		Your Application (Configuration)

	 Ansible	Operating System (Configuring Linux/Windows)		
 CloudFormation Terraform	Compute (EC2)	Storage	Networking	
AWS Managed Automations		AWS Global Infrastructure		
		Regions	Availability Zones	Edge Locations

NEVER BEEN EASIER TO REACH NEW HEIGHTS

Multi-Cloud Services

Multi-cloud means taking the best services from a range of cloud providers and bringing them all together into one solution. ClearCloud works with you to identify the best products within each cloud provider so that you have the power to choose what's right for your businesses.

The Power Of Choice

Multi-cloud strategies allow you to “Pick and Mix” the best of cloud services from various providers.

Avoid Vendor Lock-in

By utilising multiple clouds, you achieve freedom and flexibility by not being tied in to one provider.

Our platforms covered

OUR TEAM IS AN EXTENSION OF YOUR TEAM

“We had an existing and complex AWS setup with a different AWS partner. ClearCloud offered much smoother support with a more involved and human touch. For me they have completely delivered on this, and I think of their team as an extension of ours.”

Craig Lager – Technical Manager

PREZZYBOX

“Working with ClearCloud is like having a group of dedicated experts as an extension to our internal IT team their knowledge and can do attitude goes beyond any partner I have worked with previously. I cannot recommend them highly enough!”

Dave Mills - IT Director

FOCAL.AGENT

“ClearCloud’s expertise in AWS is fantastic. They’re automating the solution, giving us recommendations and helping us to resolve issues within our applications. Experience has shown us that they don’t like a problem, they like a solution, so they’re always happy to go above and beyond. It’s all we expected and more.”

Matt Gladwin - Head of IT Operations and Security

Additional Services

Serverless Framework

The Serverless Framework helps you build web, mobile and IoT applications with serverless architectures, using AWS Lambda, Azure Functions and Google Cloud Functions with less overhead and cost. It provides a powerful, unified experience to develop, deploy, test, secure and monitor your serverless applications.

Database optimisation and administration

We offer key additional services such as big data/database administration and migrations to help businesses innovate faster.

Well-Architected Cloud reviews

Our Well-Architected cloud reviews provide a consistent approach to evaluate your architectures, and implement designs that will scale over time.

Application performance management

As an optional add-on to our service packages, we will monitor your application, detect and diagnose complex application performance problems to maintain an expected level of service.

Rate card consultancy

We offer a day rate consultancy for those projects that require a quick turn-around or that you may not have the skills in house to deliver.

Please speak to your account manager if you wish to add-on any additional services, or get in touch with our ClearCloud team on [0161 5330286](tel:01615330286) for pricing and further information.
